

HPV VACCINATION

Prevent cervical, vaginal, vulvar, anal and oropharyngeal cancers -
get vaccinated against Human Papillomavirus (HPV) today

HPV is a common virus which affects both men and women and is usually transmitted sexually. Most HPV infections don't cause any symptoms, and go away on their own. But HPV can lead to cervical cancer in women. There is no cure for HPV infection, but some of the problems it causes can be treated.

This HPV vaccine is a FDA-approved vaccine to prevent HPV infection, including HPV 16 and HPV 18, the strains of HPV that cause most cervical cancers.
